Abstract

Do not forget to check each reference while importing in your Bibtex file. Especially, IEEExplore export may lead to ill-formatted conference name like *Robotics and Automation, IEEE International Conference on*.

Contents

Introduction

The proposed chapter titles have to be adapted to the content of your report.

Chapter 1

Big picture

Chapter 2

State of the art

2.1 First topic

2.2 Second topic

Chapter 3

Actual work

When dealing with rectangled triangles (see Figure 3.1) I sometimes used this theorem from [1]:

$$a^2 + b^2 = c^2 \tag{3.1}$$

The demonstration is in Appendix A.

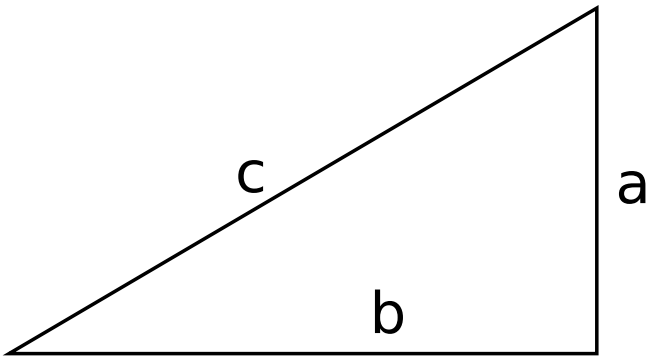

Figure 3.1: A triangle with letters

Chapter 4

Experiments

When trying to draw a rectangled triangle, my program comes up with Figure 4.1 that is neither rectangled nor a triangle.

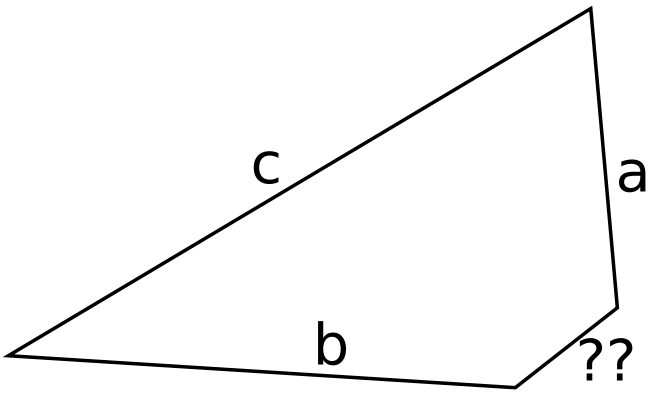

Figure 4.1: Triangle drawn by my program. Note the 4th side.

Unless there is a bug in my program, which is unlikely, this research indicates that the whole theory on triangles having 3 sides has been wrong for years, maybe decades.

Conclusion

In this thesis we have shown that triangles may have up to four sides [1].

Also, really do not forget to **check each reference** while importing in your Bibtex file. This is done one for each reference and you know you are good to go afterwards..

[1] At least on my computer

Appendix A

Proof of theorem 3.1

Proof. (3.1) was already demonstrated in [2]. □
